Shanling CR60 – Ripping Guide for Eversolo Streamers

1. Set CR60 to Ripping Mode (Rear Switch) and use Mode button to switch it to USB-C Mode.

2. Make sure Eversolo is set to External Storage Device (Settings - General - USB OTG Port).

3. Connect CR60 to Eversolo with a USB cable.

(USB-C on side of CR60, USB-A OTG on side of Eversolo)

4. Go to "Files" on Eversolo and CR60 will show up as a new drive, called "AUDIO".

5. Here you will see the tracks from the CD as WAV files.

Click on the multifunctional icon in top right corner, and pick either all or some of the WAV files.

Then click on Copy icon (first from left).

5. Now go to any folder on the memory of Eversolo and Paste there the copied files (Multifunctional icon - Paste (second from left)).

It can take a little while to copy, please wait for the process to finish.

6. The result is WAV files ripped to the storage of Eversolo.

Directly on Eversolo, ripped files can be sorted into dedicated folders named after the CDs and it’s also possible to manually change name of each file to match the track title.
